

Central Digta Configurator Software for efficient control

With the Central Digta Configurator, Grundig Business Systems addresses the needs of users and administrators alike. Those who use dictation devices want them to be easy to configure; administrators, meanwhile, want more centralized control. The dictation devices are connected through the company's own network to a central databank, which supplies them automatically with the latest configuration and firmware. In addition, the administrator can organize the devices into groups that suit a company's specific structures. For testing purposes, and for regular use on a small-business level, the Central Digta Configurator (Limited) is available as a free download. This free version can be used to administer up to 10 mobile dictation devices.

Fast and Easy Roll Out

- Devices can be grouped to match a company's organigram
- User administration by device
- Individual workflow reflected by device
- Guaranteed correct setting of necessary functions

Easy Administration Easy Care

- Distribute new firmware with a single click
- No more "sneaker net"
- Lock certain functions to prevent unwanted alterations
- Swift replacement of damaged or stolen equipment
- Easy to add new workers into the dictation network

Technical information

Please find the system requirements of the current version and Thin clients at www.grundig-gbs.com/en/system.

Client-Server-Architecture:

- Management Console: For central administration of device configurations
- Digta Configurator (Updater Client): A client is operating in the background, communicating with the database and keeping the device configurations up to date. Unblocked settings can also be altered in this manner.

Areas of Use:

- Grundig Business Systems releases new firmware with new functions. New device-related firmware with useful functions. After downloading the new firmware, just a few simple clicks determine which equipment and which authors will be using the new firmware functions. From there on, the selected equipment is automatically updated – no need for the administrator to chase equipment down for installing new updates.
- Adjusting existing device configurations during operation. The members of a department have been working for a while with the Digta 7 – As of organizational modifications other dictation types have to be used. Administrators can do changes centrally on their management console. The selected devices will be automatically updated the next time they are connected to the data base. There is no longer any need to tediously collect the dictation devices for configuration and redistribution to the staff.
- The Digta 7 was stolen from a car. Replace the stolen device; no need for laborious reconfiguration of all the former settings; simply select a backup version of the configuration, install it on the new device, and continue working as before.

The performance features described by Grundig Business Systems only apply to genuine Grundig Business Systems hardware.
