

with automatic vocabulary improvement

## Enjoy the most effective dictation document workflow

With the Central Voice Transcriber a detour becomes a shortcut. The Central Voice Transcriber collects the DSS and DSSPro dictations from a central queue for transcription into written text on a high performance computer by the DigtaSoft Voice speech recognition.

The outcomes are sent to the secretary as Microsoft Word files together with the DSS / DSSPro dictations. The dictations can be listened to quickly. A simultaneous marking function in the recognized text is allowing easier proofreading. The secretary corrects errors and performs formatting (font, letterhead, markings) at once. Based on the completed document, vocabulary maintenance is done automatically on a central PC in the background as well.

- Speech recognition of all dictations originating from many authors is done on one or several high-performance, central computers
- The secretary corrects errors and performs formatting in a one-step procedure directly in the Word document without time consuming Dragon correction window
- Easier proofreading thanks to simultaneous marking of the recognized text
- Automatic vocabulary improvement of the central vocabulary after completion of the Word document
- Speech recognition and vocabulary improvement may be processed on different central computers to allow a higher dictation throughput.
- The central CVT components work as services on the network computer making for comfortable administration.
- Corrections also possible via Thin Clients directly in Microsoft Word

# System Requirements

## Licensing

---

- CVT license for each central computer running a CVT.
- One DigtaSoft Voice speech recognition license per author
- One DigtaSoft Pro license for each proofreading workstation including DS Voice Interface
- Licensing / activation of the various components is done via GBS online licensing. For this purpose an internet connection is requested.

## Support service and programme maintenance

---

Central software components which are installed in the network have to ensure maximum operational efficiency at any time. To be able to provide the respective support service and programme maintenance for the CVT, a service contract with a minimum duration of twelve months has to be concluded.

## Hardware and software requirements

---

Depending on the dictation volume, one or more powerful computers running exclusively speech recognition are recommended. A CVT can convert about 30 hours of recordings in 24 hours. There are no limitations concerning the number of authors, for example 20 authors with an average volume of one hour of recordings a day will need one CVT.

## Technical information

---

Please find the system requirements of the current version at [www.grundig-gbs.com/en/system](http://www.grundig-gbs.com/en/system)

The performance features described by Grundig only apply to genuine Grundig accessories.  
The use of nonGrundig Business Systems accessories or those which are not recommended and approved by Grundig Business Systems automatically void any warranty claims towards Grundig Business Systems.  
Printed in Germany. Alterations and availability are subject to change without prior notice.

## Components of the Central Voice Transcriber

---

The CVT uses several components on the network and at the workstation.

### Transcriber Angel:

Monitors as a service on the network computer the speech recognition and the dictations to be converted

### Vocabulary Manager:

Controls as a service the vocabulary improvement on the network computer by comparing the corrected documents with the originally recognized texts.

### Transcriber Add-In:

A Word Add-In for installation at the workstation, which controls the simultaneous marking function.

### DigtaSoft Voice:

Speech recognition software for installation on the central network computer for offline recognition and vocabulary improvement. It's controlled via the Transcriber services.

### DigtaSoft Voice Interface:

DigtaSoft Pro interface for the transfer of speech recognition dictations, allocation of authors' profiles and operation mode setting

## Download in customer center

---

### Central Voice Transcriber:

Setup for installation of the CVT, Transcriber services and Transcriber Add-In.
