Central Voice Transcriber (CVT)

50% less transcription work thanks to speech recognition

Speech recognition for mobile dictations

The Central Voice Transcriber software allows central speech recognition control for mobile dictations. It operates extremely efficiently: 30 hours of dictation is converted within 24 hours. The Central Voice Transcriber can of course administer any number of speech profiles.
Central conversion

Speech recognition occurs offline: All dictations are automatically transferred to a central network computer via the Central Voice Transcriber. There they are converted into text files and afterwards sent to the transcription service.

Transcription completed in half the time

A relaxed working atmosphere for the secretary. Secretaries receive dictations in word files as well as in audio format. The secretary can listen, read, compare and correct, all at the same time – and save 50 percent of the time. Corrections are automatically stored in the text profile of the respective author on the server afterwards. In this way speech recognition becomes more perfect with each new dictation.

Easy operation

Authors do not have to change. They simply dictate as usual while the Central Voice Transcriber does the rest. Speech recognition and vocabulary maintenance is automatically done in the background.

Gain time

50 percent more time and capacity gained for the transcription department. Secretaries can do their tasks more efficiently and are released from workload. Your office can expand even while the administrative department remains constant.

Save resources

You do not need new hardware, you only need a central, high performance computer for the Central Voice Transcriber. You can leave everything as is. Saving money and time.

Increased efficiency thanks to process optimisation with digital dictation and speech recognition

| Mobile dictation | Dictation transfer into the network from any location | Speech recognition at the server with CVT Tanscriber (CVT) | Correction and completion of the document at the secretary | Amendment of the speech profile on the server, via CVT |
