Digta CordEx

Firmware Update – Version 1 B70 (May 2011)

- **Pressed key recognition - optimised**

In Some cases, because of electronic component tolerances, key presses were not always accurately recognized. Use of the B70 Firmware, ensures a more reliable and accurate identification of the keys pressed.

Changes to the Firmware Update – Version 1 B69 (October 2011)

- **Shutdown time now adjustable on the Digta Cordex**

The Digta CordEx cordless dictation microphone has up to now, had a fixed shutdown time of 15 minutes to preserve the battery life when the microphone was not in use. Many customers requested an extended shutdown time, or alternately, be able to set the Digta CordEx to manual shutdown only, since they always docked the device to recharge it when not in use.

The firmware update Build 69 includes an additional menu item for the Digta CordEx, with which the shutdown time can be variably configured. The firmware update is available for download on the GBS website at: [Service->Download->Firmware->DigtaCordEx](#). New deliveries of this product will of course include the new firmware.

If you have any problems with the firmware update, please contact Technical Support at Grundig Business Systems where you will be assisted. Please have the previous firmware version and serial number of your device available, for quick and easy assistance.

We highly recommend that you perform this update.
