Business Systems

Digta 7 Premium

Professional mobile dictation

Easy operation

With "Easy Mode" the functions on the display have been honed down to the essentials. Especially users who are familiar with analogue dictation devices, appreciate this function and the operating comfort.

Protection on the go

The Digta 7 was optimized for mobile use. It is particularly sturdy and the handy softtouch coating makes for a comfortable grip. Its high-performance lithium-ion battery allows recording of over 20 hours of material. Alternatively the Digta 7 can also be operated with standard batteries. In case you leave the device unattended, the dictations are protected with a PIN code from access by unauthorized individuals.

Left-handed operation

The display is tailored to your requirements – if you prefer left handed use, it rotates thanks to the motion sensor.

Brilliant sound

Two microphones make for a particular clear sound quality. Thanks to the stereo sound (WAV/MP3 recordings) you are also best equipped for conferences and interview recordings.

Slide switch with "Touch Pin"

It allows you to dictate with your eyes closed, you'll only feel the touch pin in the stop position. You will know whether the Digta 7 is in record or record pause mode without even looking. Moreover you can configure the Digta 7 according to your dictation style. The slide switch offers four different operation modes, the lateral buttons are freely programmable.

XXL display

With the transfective, backlit grayscale LCD display you will always have a clear overview, even with direct sun light, the contrast is automatically adjusted to the surrounding light.

Docking station

The Digta Station 447 docking station allows you to transfer your dictation quickly and easily to your PC and charges the accumulator at the same time. Also available as product variant Digta Station 447 Plus. A second rechargeable battery can be put on charge separately in the docking station. A foot switch connection allows handsfree dictations, and with a headphone the docking station together with the Digta 7 becomes a fully-equipped transcription station.
