

DigtaSoft One

Speech processing software

Digital dictation can be as simple as this

GRUNDIG
Business Systems

Intuitive Software for Beginners

For a trouble-free introduction to digital dictation

This easy-to-use software concentrates on the essentials: the basic functions for recording and playback of digital dictations.

Intuitive operation

Download the software via online link and install it with just a few clicks – and off you go. The application is as easy to handle for the users.

Optimised recording format

DigtaSoft One creates files in the DSS (Digital Speech Standard) format. This standard was developed for voice files. This way, all data is compressed to a compact size and played back with high quality.

Simple dictation transmission

Upon completion, your dictation will be sent to the secretary's office by e-mail or automatically via DssMover. As soon as you place your dictation device in the docking station, transmission starts. The secretary is then able to find all new dictations in the software's inbox folder.

High comfort

During transcription, the secretary can control playback as usual by foot pedal.

Safety

Your data is safe with us. DigtaSoft One allows you to send sensitive recordings in encrypted form to protect the file from unauthorised access

Compatibility

DigtaSoft One allows you to link your dictations to documents such as Word or PDF files. Or import other file formats – AMR, MP3 and ima4 files – convert them to DSS and playback them with DigtaSoft One.

The next step

Your dictation volume has risen? No problem – you can upgrade to DigtaSoft Pro at any time.

Always on the safe side

For DigtaSoft One we recommend a service contract. This will ensure that you always stay up to date. It includes free upgrades as well as telephone and remote maintenance support.

For more information on the service contract, see <https://www.grundig-gbs.com/en/support/maintenance-support/>
