

DigtaSoft Pro

The language processing software

Record, transfer and transcribe dictations

GRUNDIG

Business Systems

Solution for professional users

Flexible dictation workflow

The professional dictation software DigtaSoft Pro ensures optimised workflow management for your digital dictations. Numerous functions such as the automatic transmission of your dictation to the transcription office in the network, easily to be integrated speech recognition software and direct communication between the transcriptionist and the dictation machine streamline complex processes. DigtaSoft Pro provides clear management of all files and documents in networks and with high dictation volumes.

Intuitive operation

The appearance is based on the familiar Office look. Thanks to the intuitive user interface with menu bar, even beginners will quickly find their way around.

Individual configuration

The software can be downloaded online and operated via a professional installation to suit your individual needs. With the additional central administration tool Central DigtaSoft Configuration Center (DSCC) IT administrators have everything under control.

Efficient working

You can set up multiple input folders or dictation pools. With DssMover, your mobile voice recordings are automatically transferred to the secretary and assigned correctly during import. All important information such as author, priority of the dictation, patient/client name etc. is provided by the digital "accompanying sheet". You can create dictation worktypes and dictation groups, set deadlines and keep an eye on the editing status of your dictation at all times.

Secure data

With DigtaSoft Pro, your sensitive data is on the protected. Real-time encryption (double 128-/256-bit encryption rate) or subsequent encryption meets the current requirements of health systems and legal services. You can also additionally protect your dictations against unauthorized access via password.

High comfort

DigtaSoft Pro illustrates the complete dictation workflow. Feedback is automatically sent to your Digta 7, so that you always have an overview even with multi-level authorisation processes. Status reports on the completion of text documents are sent directly from the secretary's office to your dictation machine – saving precious time.

Flexible application

You work with a central server? No problem, DigtaSoft Pro supports common thin clients in WTS, CITRIX or Linux environments. Thanks to its own audio channel, you don't have negative effects when it comes to response times or audio quality.

Ready for the future

With the interface for the speech recognition programs DigtaSoft Voice and Dragon NaturallySpeaking, you will be perfectly prepared for the most challenging requirements. Speaker-known dictations can be corrected easily and comfortably in DigtaSoft Pro. There's no better way to do your job.

Professional recording standard

DigtaSoft Pro creates your dictations in DSS Pro (Digital Speech Standard) format. DSS ensures high playback quality despite small file sizes and stores additional information for easier file management.

Always on the safe side

We recommend a service contract for DigtaSoft Pro. This ensures that you always stay up to date. It includes free upgrades and free support by email, phone and remote maintenance. If you run DigtaSoft Pro in a WTS/Citrix environment, a signed service contract is a prerequisite. This is the only way to ensure smooth operation and complete satisfaction.
