Digta Transcription Starter Kit

Complete transcription package

The Digta Transcription Starter Kit provides all the equipment you need for professional transcription. It is especially suited for beginners. Included in delivery are headphones and foot switch, which are notable for their longevity and ergonomic form including the DigtaSoft software application. The software allows dictations to be received via e-mail. A further advantage is the display of priorities, identifications, and time signatures – provide an optimal overview of the existing dictations and their urgency.

Practical headphones for everyday work

The under-chin strap of the Digta Swingphone 568 is the right solution for all those who value their appearance: These headphones are kind to your hair and can be optimally adjusted to the width of your head using an adjustment wheel. Particularly practical: the quick disconnect coupling. When you leave your desk, you simply leave the long section of the cable with the jack plug at the end connected to your PC, so you can quickly continue with the audio transcription when you return. You can store the Digta Swingphone 568 headphones with the short piece of cable in a drawer, for example, without the cable getting knotted.

Scope of delivery

Inexpensive writing station for beginners

- With foot switch Digta Foot Control 540 USB
- With headphones Digta Swingphone 568 Jack or USB
- Available with the workflow software DigtaSoft One or Pro (incl. license for one writing station)

Transcribe your dictations simply and professionally with a work station solution from Grundig Business Systems! We offer solutions for both individual office typing stations and networked transcription services.

Easy dictation transfer via e-mail or in the DigtaSoft network. Rely on and enjoy the durable and ergonomic premium products which are the perfect choice for external transcription services as well.

With the foot switch transcribe conveniently

The Digta Foot Control 540 USB foot switch is a high-quality control device for audio transcription with a proven ergonomic design. Its three buttons are assigned the functions of start/stop, fast forward and fast reverse. Depending on the setting of the switch in the base plate, the start function of the Digta Foot Control 540 USB remains electronically engaged when the foot pedal is pressed, or the dictation is played back as long as the foot pedal is pressed. The functionless plate in the middle serves as a resting position when operating with one foot.

Advantages DigtaSoft One:

- Ideal for easy entry into digital dictation
- Easy installation
- Simple footswitch playback control
- E-mail dispatch of the dictations
- Paid upgrade to DigtaSoft Pro possible

Advantages DigtaSoft Pro:

- Citrix and Windows Terminal Server Support
- Ideally suitable for cooperation in a dictation network
- Automatic setting of deadlines and priorities
- Display of the complete dictation history
- Dictation management with several inboxes and dictation pools possible
- Constant monitoring of the note accompanying the dictation
