

Dragon® Professional Anywhere

Professional speech recognition

directly in the application: always, everywhere, immediately.

GRUNDIG

Business Systems

Dragon® Professional Anywhere

Dragon® Professional Anywhere is a simple, flexible, and server-based solution that effortlessly delivers professional, accurate speech recognition without taxing the user's PC resources. The software enables users to capture their texts easily, quickly and in detail in the usual quality with professional speech recognition.

Dragon® Professional Anywhere can be used on all machines in your Windows-based infrastructure, including virtualized PCs and PCs with remote access. A service employee from Grundig Business Systems will be happy to set up your server. Then it's just a matter of minutes to download and install this lightweight Windows client application and establish a secure connection to your organization's server. Access to the user's individual voice profiles can be achieved via all workstations; central subject-specific vocabularies including phrases and formatting rules are available.

High-performance and precise speech recognition is guaranteed. Additional features are e.g. B. customizable voice commands and auto-texts, navigation and voice-based correction.

Easy to install, even easier to use Dragon® Professional Anywhere can be installed on any workstation or laptop in the organization in minutes, without the need for complex configurations. Immediately after installation, users can open the software from the Windows Start menu, place the cursor where you want the recognized text to appear and start dictating - in almost any Windows-based application.

Speech recognition at the cursor

This professional speech recognition for working on thin clients allows you to dictate into almost any application in which you can also type. Just put the cursor in the right place and get started!

Unlimited productivity

The application is available on all devices in the network and without restrictions. This allows users to concentrate on the individual texts - and not on the IT.

Easy installation and maintenance

One-click installation at the individual workstations without complex configuration and automatic updates mean less effort for the IT department and immediate availability for the users.

Safe and private

The clients connect to a server component installed on-premises on your network; 256-bit encryption ensures that compliance and security guidelines are adhered to.

Fast IT integration

The support of thin client hardware, server virtualization and Citrix environments allows quick and easy integration into your existing IT infrastructure.

Best advice – with experts at your side

Are you planning to introduce or optimize speech recognition in your organization? Then rely on the experts at Grundig Business Systems! In close consultation with you we develop a concept, including planning of the required server resources, accompany the implementation and train all users.

Reliable service

Grundig Business Systems carries out the installation and offers a complete service for real operation at a fixed price with:

- Telephone hotline and remote desktop (Remote maintenance)
- 2nd level support, also for updates
- Firmware and software updates
- Vacation replacement for your administrator
